Simple 802.11n Migration and RF Management

**Live Video Webcast, Tuesday, January 13, 2009
10–11 a.m. Pacific Time**

Dear NAME,

Join us for an interactive webcast where we'll discuss how migrating to an 802.11n network has never been easier. Six times faster than existing wireless networks, 802.11n will give your workforce more power and coverage for increased productivity. Cisco experts will be available to explain the best way to transition and optimize your network.

Also hear about RF planning and design considerations that impact network performance, such as "CleanAir technology." This capability can help your network isolate and mitigate certain types of interference, such as microwave ovens, cordless phones, Bluetooth and other Wi-Fi devices for a continuous network experience.

Technical experts will address such important topics as:

- Introduction and key advantages of 802.11n
- Simplifying wireless management for cost reduction
- Planning and deployment tips—including RF management
- Optimizing capacity and coverage and improving client connections

Online Panel Discussion plus Live Q&A

[Register now](#) and join technical experts in a discussion on how to easily transition to a more powerful, predictable and reliable network. Experts will also be available to answer your questions throughout this video webcast.

Sincerely,
Cisco
