Discovery™ PET/CT 600

Smart design

This smart system and workflow design enable you to discover innovative areas of healthcare without complicating the process. In fact, we have gone to great lengths to streamline workflow to improve the technologist and patient experience to secure better results. This is all aimed toward the ultimate goal of passing the benefits along to your patients.

Innovative workflow

The Discovery Dimension is at the heart of the Discovery PET/CT 600, the launch pad of our leading clinical innovations.

To save you time during exams, workflow is streamlined by the integrated calibration setup as well as by having PET and CT acquisition screens and reconstruction parameters on one common interface.

You will be able to prescribe, acquire and process both PET and CT gated images right on the console and then automatically view and phase match for advanced motion management capabilities. Smart innovations at your fingertips from the powerful Discovery Dimension.

Simplified Calibration

Calibration that does not interfere with your daily throughput. The daily calibration is designed with intelligent features like an automatic source loader for no dose exposure to the technologist.

Patient friendly

The Discovery PET/CT 600 will provide your patients with a comfortable scanning experience.

With a large 70cm bore that offers a full PET and CT Field-of-View and the 230kg. patient table, you can confidently offer your patients a scan with their comfort and needs in mind.

The GE Discovery PET/CT 600 offers an increased vertical scan range that provides more flexibility in radiation treatment planning and patient positioning.

Front and rear system controls and displays give you more

flexibility in patient contact and system control throughout the scan room. Smarter design is a powerful solution for patient satisfaction.

An experience your patients can believe in.

Smart investment

Designed with the reliability you expect from GE Healthcare, the Discovery PET/CT 600 was built on a robust platform to give you peace of mind. You can expect outstanding reliability, uptime and productivity.

You will be backed by a customer service team of experts. Our support team is readily available to support you both online through the Online Center remote support and in the field. Reliability and service you can believe in.
