Embrace the Power of Next-Generation Wireless

Extend the power of your wired network to your mobile workforce:

- Empower teams anywhere without sacrificing security or performance
- Provide reliable wireless access to applications in challenging RF environments
- Support growing diversity in devices and guarantee compatibility

Visit the Cisco Next-Generation Wireless website to learn more:
www.cisco.com/go/nextgen-wireless

Dear Valued Customer,

The ability to collaborate across environments, devices, and networks is critical to maintaining a competitive edge and enabling business growth. The Cisco Next-Generation Wireless solution is an integrated wired and wireless solution based on 802.11n wireless.

The solution provides the performance required for a truly mobile experience, providing up to five times the throughput of current 802.11a/b/g networks and enhanced reliability and predictability of 802.11n wireless coverage. With Cisco Next-Generation Wireless, you can:

- Meet user demands for pervasive wireless connectivity
- Deliver the performance needed for existing and future mobility applications
- Help ensure scalable support for a diverse array of devices

With next-generation wireless, businesses can unify their communications infrastructures to deliver a consistent user experience while maintaining a low total cost of ownership.

Visit <URL> or call <Partner Phone Number> for a free consultation on your company's mobility strategy or to receive a customized report on best practices for designing next-generation wireless networks.
