Embrace the Power of Next-Generation Wireless

Deliver high-speed mobility to your students, staff, faculty, and administration:

- Empower learning with video, voice, and multimedia—without sacrificing performance
- Deliver predictable, reliable mobility anywhere on campus—including high-density areas
- Extend security by deploying wireless video surveillance cameras anywhere on campus

Dear Valued Customer,

The ability to achieve more within existing budgets is critical for educational institutions that must meet the ongoing technology requirements of their students, faculty, staff, and administrators. The Cisco Next-Generation Wireless solution, based on 802.11n, allows institutions to cost-effectively meet and exceed the mobility needs of their constituents.

The Cisco Next-Generation Wireless Network is an integrated wired and wireless solution that delivers superior performance, with five times the throughput and enhanced reliability and predictability of existing networks. With Cisco Next-Generation Wireless, educational institutions can:

- Meet demands for pervasive wireless connectivity, even in challenging RF environments
- Support current and future mobility apps for teaching, learning, and campus operations
- Ensure support, with backward and future compatibility, for an array of client devices

With the Cisco Next-Generation Wireless solution, educational institutions can seamlessly support new bandwidth-intensive applications, centrally manage wireless devices, and enhance campus safety while delivering a consistent user experience and maintaining a low total cost of ownership.

Visit <URL> or call <Partner Name> at <Partner Phone Number> for a free consultation on your institution's mobility strategy or to receive a customized report on best practices for designing next-generation wireless networks.
