Embrace the Power of Next-Generation Wireless

Extend the power of your wired network to improve operational efficiency

Dear Valued Customer,

Companies that manufacture goods and services need to manage and control the materials, machinery, people and products created within and throughout the supply chain. Collaborating with suppliers, partners and customers across challenging RF environments, disparate devices and networks are critical to maintaining a competitive edge. The Cisco Next-Generation Wireless solution helps manufacturers control costs, streamline processes and respond rapidly to new demands. Manufacturers migrating to the Cisco Next-Generation Wireless solution can realize the following benefits:

- More reliable and predictable WLAN coverage in challenging RF environments
- Reduced costs and increased collaboration by using 802.11n to support wireless voice
- Ability to track the location and condition of parts, equipment and mobile assets

<Partner Name> offers the Cisco Next-Generation Wireless solution to help manufacturers meet the increasing demands for pervasive wireless connectivity required to support a breadth of mobile applications over a wide array of devices. With Cisco Next-Generation Wireless, an integrated wired and wireless solution based on 802.11n, manufacturing companies can also unify their communications infrastructures to deliver a consistent user experience while maintaining a low total cost of ownership.

Visit <URL> Cisco Next-Generation Wireless website or call <Partner Phone Number> for a free consultation on your company's mobility strategy or to receive a customized report on best practices for designing next-generation wireless networks.
