Cisco Next-Generation Wireless offers secure reliability with performance

In the fast-paced, demanding manufacturing environment, it's a challenge to contain costs, streamline processes and improve operational efficiencies. Cisco is delivering with a high-performance, next-generation 802.11n wireless solution with five times the throughput and enhanced reliability and predictability of coverage to deliver mission-critical applications throughout the value chain.

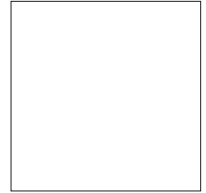

Discover how Cisco and <PARTNER NAME> can help you:

- Provide reliable wireless access to apps in challenging RF environments
- Reduce operational costs by using 802.11n to support wireless voice
- Track the location and condition of parts, equipment and mobile assets

<Partner Name> can help you cost-effectively implement a Cisco Unified Wireless Network with next generation wireless technology today so you can have a secure, scalable, and pervasive wireless network.

Visit <URL> or call <Partner Phone Number> to discover how <PARTNER NAME> and Cisco can help your business provide pervasive wireless with reliable connections from any location.
