## Protecting your Network with Integrated Wireless Intrusion Prevention

**Live Video Webcast, Tuesday, October 14, 2008  
10–11 a.m. Pacific Time**

Dear NAME,

Is your wireless network secure? Does your network have the advanced security required to deal with ever-changing and increasing threats?

Managing a next-generation wireless network calls for an integrated and simple approach to wireless security. Join the next Mobility TV webcast where we'll discuss how to safeguard your information by effectively securing your wireless network. Hear about emerging wireless specific threats and learn how to repel risks while conserving IT resources.

Find out how you can easily address these challenges by deploying the Cisco Adaptive Wireless Intrusion Prevention System (wIPS). Offering complete threat detection and classification capabilities, Cisco Adaptive wIPS can be integrated into your existing wireless network for operational simplicity and cost effectiveness.

Join us for this live Mobility TV video webcast and preview the steps required to implement the most secure wireless network available. Hear Cisco experts address such security topics as:

- Emerging wireless threats and how to protect against them
- Developing strategy for wired and wireless intrusion prevention
- Best practices for design and deployment
- Achieving cost-effective regulatory compliance

### Online Panel Discussion plus Live Q&A

[Register now](#) and join Cisco technical experts in a discussion on how to secure your wireless network. Experts will also be available to answer your questions throughout this video webcast.

Sincerely,  
Cisco
